## EEC Declaration of conformity

**Manufacture (name and address):**

**Fasterholt Maskinfabrik A/S**

Adresse: Ejstrupvej 22,  
Fasterholt  
Ort: 7330 Brande  
Country: Denmark  
Web: [www.fasterholt.dk](http://www.fasterholt.dk)

CVR: 58 83 28 12  
TEL: +45 97 18 80 66  
FAX: +45 97 18 80 40  
E-Mail: [mail@fasterholt.dk](mailto:mail@fasterholt.dk)

Hereby is certified that the following product:

Description, ID/mark, type: Irrigator FM 2500

Serial No. if any: \_\_\_\_\_

Notified body if any: \_\_\_\_\_

EEC-type certificate if any: \_\_\_\_\_

Harmonised standards if any: EN 908:1999+A1:2009.  
DS/EN/ISO 12100:2011.  
DS/EN/ISO 14120:2015.

Is made according to the announcement no.693 of 10. Jun 2013 that implements the DIRECTIV 2006/42/EC.

Name, title and signature of manufacture:

\_\_\_\_\_  
Date

  
Signature

## !!! Important!!!

### Read this manual carefully before using your irrigator!

Your new Fasterholt irrigator is a high quality, Danish built machine, but even the best machines only deliver top results when they are properly handled and maintained.

To ensure that the machine complies with the EU Machinery Directive, only original spare parts may be used. Otherwise, compliance will be lost and safety will be entirely at your own risk.

#### FM2500

Fasterholt FM2500 is a self-propelled irrigator that drives across the field and unwinds the hose by itself. A turbine is used to power the machine and hose winding and irrigation stop automatically when the machine gets back to the hydrant and the fixed stop.

The machine is available with an underpressure stop or an overpressure stop. With the overpressure stop function, make sure that the pump is either switched off via a pressostat or can dispose of water by other means when the machine stops irrigation. With the underpressure stop function, the pump must be stopped via a pressostat.

The machine must be supplied with a maximum pump pressure of 12 bar. The recommended pressure 7-9 bar.

The irrigator is only suitable for irrigation with clean water from a drilled well or a watercourse.

We must point out that any damage caused by incorrect operation and/or negligence is not covered by the warranty. Fasterholt Maskinfabrik A/S only guarantees new machines sold through an authorised Fasterholt dealer. Any modifications made to the design of the irrigator shall exclude Fasterholt Maskinfabrik A/S of any liability and shall void the warranty.

#### Safety instructions/warnings

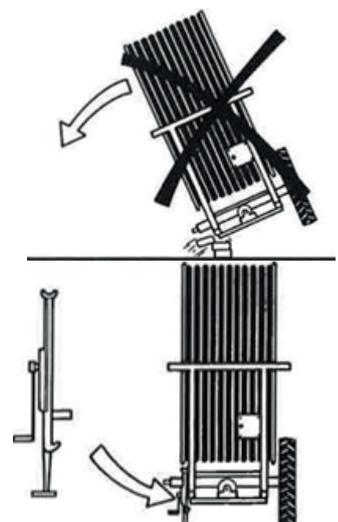

As this machine is used for field irrigation involving high water pressure, there is a risk of injury if the machine is used inappropriately. The warnings and safety instructions given here must therefore be respected and followed precisely.

- It is forbidden to stand on the machine during irrigation, as this may result in fatal injury.
- Only one person (operator) should be in the vicinity of the machine during transport, setup and dismantling.
- When starting the machine on falling ground, you must be VERY careful not to disconnect the tractor from the machine until the irrigator has been put into gear, otherwise the machine may run away.
- All shields are fitted for your protection. Please leave them in place.
- Remember to tighten all wheel bolts.
- If a wheel is removed, the machine must be jacked up and very stable, because it will fall completely on its side if it overturns. This may result in fatal injury.

#### WARNING!

- To perform an EMERGENCY STOP, pull the cable for the miswinding bar, pull the miswinding bar or press STOP on the Program Rain computer.

- V-belts may only be fitted after the machine has been unwound for the first time. (Only the first time the machine is used for irrigation).
- The gun must face out to the side when unwinding the machine.
- Stand aside when the gun is operating.
- Warning against contact with overhead power lines with the machine or water jet. Therefore avoid irrigation on or near power lines.
- During transport on uneven roads/fields, move VERY carefully according to the conditions.
- When parking the machine, use the wheel chocks mounted by the rear wheels.
- DANGER! Avoid welding in the paint layer! Before welding, remove all paint from the welding area – avoid inhalation of grinding dust.
- Hydraulic oil can be harmful to health: - Skin contact may cause allergies - Inhalation of oil mist may cause lung disease - Leakage of oil under high pressure is dangerous, an oil jet can enter the skin, eyes, etc.

- If a hydraulic system leak is found, stop the system immediately and rectify the fault.
- Note that due to operation, the oil may be 70 degrees Celsius or even hotter. This can lead to a risk of scalding during separation of the hydraulic system.
- **IMPORTANT:** Maximum battery charging power is 2 amps. Charging more than 2 amps may cause the battery to crack. The battery must be charged at a temperature between 0 °C and +40 °C. Never place the battery in a sealed container while charging. During winter, the battery must be removed and stored in a dry place indoors in a fully charged state.
- Avoid sparks and flames on and around the battery.
- Do not short circuit the battery.
- Never disassemble the battery.
- If you come into contact with the battery's sulphuric acid, wash immediately with water. If acid comes into contact with eyes, rinse thoroughly with water and seek medical attention immediately.
- Pay attention to the battery compartment. If there are cracks, deformities, electrolyte leakage, etc., replace the battery immediately.
- If the battery is dirty, clean it immediately.
- Disposal of oil spills: - If oil spills are found, they should be cleaned up immediately with rags or oil absorbent powder. - Spilled products, as well as rags and powder used for oil spills, must be stored in sealed metal containers and delivered to the municipal collection site.
- Hoses, tyres and other parts of the irrigation machine must be disposed of at an approved recycling site.

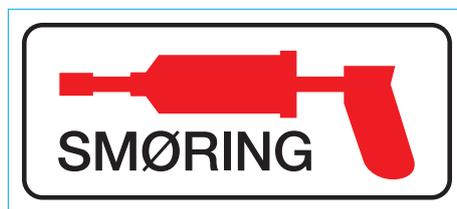

If the machine is to be moved via public roads, it must first be drained of water.

Symbols used in this product

The following symbols are used in this product and the following documentation.

**WARNING** Indicates a potentially dangerous situation which, if not prevented, could result in death or serious injury.

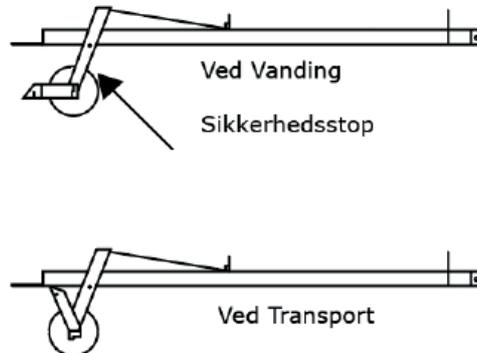

**LUBRICATION** Indicates lubrication is required as per the service description.

**SERVICE WARNING** Indicates a service hazard

## Starting your irrigator

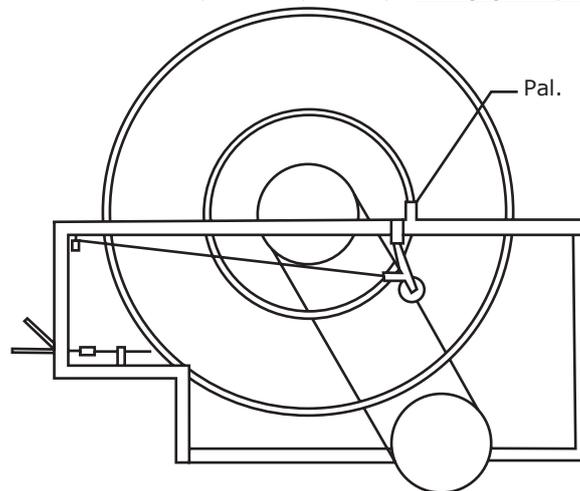

Move the machine to the field in the transport position. When the machine is at the crop to be irrigated, disconnect the tractor and position the front drawbar vertically.

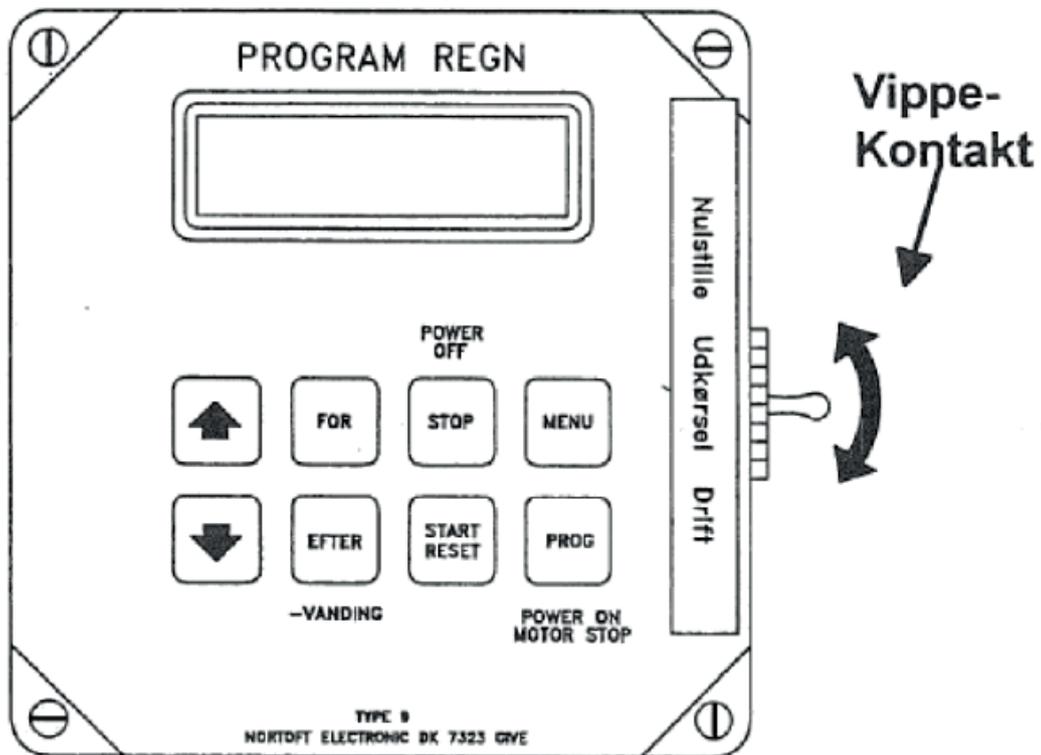

### REMEMBER!

**When starting the machine on falling ground, you must be VERY careful not to disconnect the tractor from the machine until the irrigator has been put into gear, otherwise it may run away.**

Connect the tractor to the rear drawbar. The machine then winds up in the crop and stops. **Disengage the pawl**

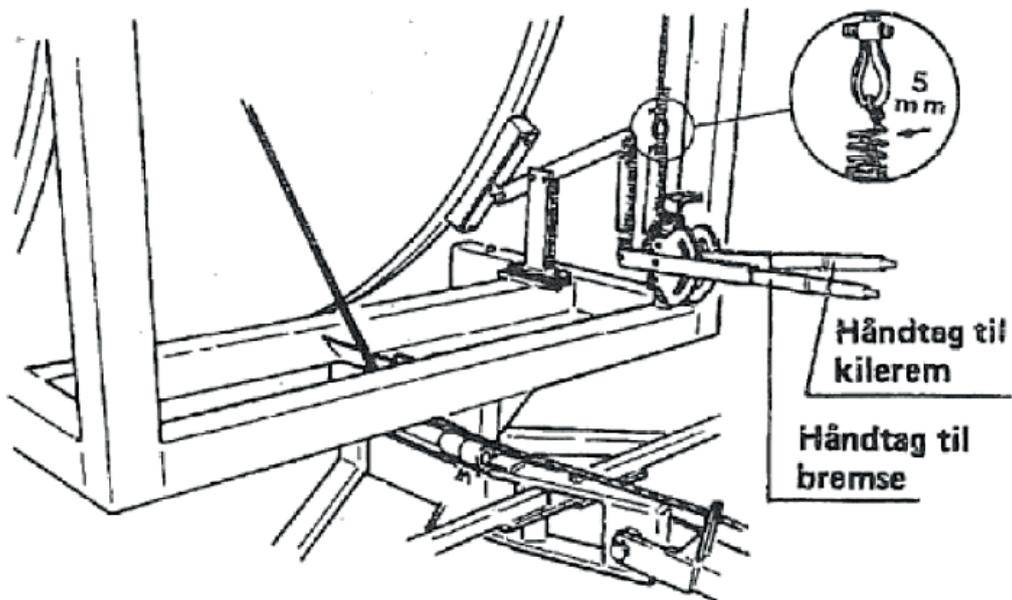

Tap the ground spikes into the fixed stop bar. Lower the drawbar over the hose, and release the safety stop so the hose reel runs on the hose. Unwind the machine with the brake applied sufficiently to keep the hose tight on the drum at ALL times.

When unwinding the machine, the toggle switch must be set to the centre position (unwind) so it cannot reset on the way out.

#### Preparing the machine for irrigation

ALWAYS remember that the toggle switch must be pressed down during operation, otherwise the machine will not move. Engage the pawl. Tighten the V-belt so there is at least 5 mm air in the spring. Release the brake lever completely. Also remember that the electric brake must be released.

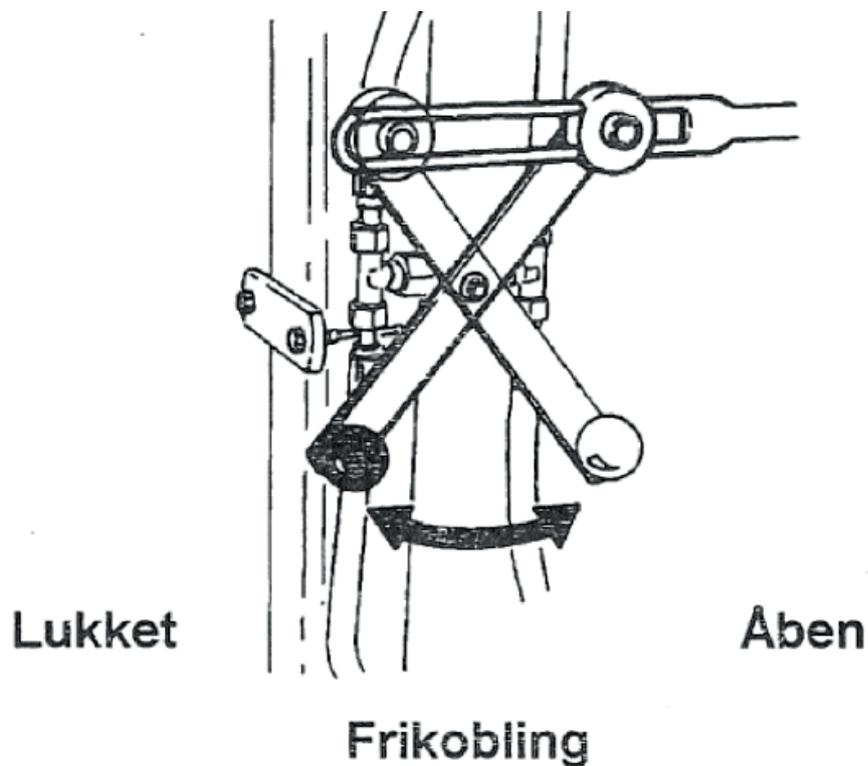

Put the machine in gear. Remember to select the right gear for the speed you want to drive at. Refer to table below or in the machine's electrical cabinet.

**Table of forward speeds for FM2500**

<b>1. Gear</b>	<b>5-12 metres per hour</b>
<b>2. Gear</b>	<b>8-18 metres per hour</b>
<b>3. Gear</b>	<b>15-33 metres per hour</b>
<b>4. Gear</b>	<b>22-48 metres per hour</b>
<b>5. Gear</b>	<b>33-73 metres per hour</b>
<b>6. Gear</b>	<b>70-130 metres per hour</b>

Remember that the decoupling valve must be closed. (Lever must be pulled out).

Attach the charge hose to the hydrant. Then open the hydrant, start the pump and irrigation can begin. Place the chock on the hose where you want to stop irrigation. When starting irrigation, see the section that refers to the operating instructions for Program Rain.

#### Preparing the machine after irrigation

After irrigation, tighten the brake and loosen the V-belt. Then open the bypass valve (lever must be pushed in) to get the gearbox out of gear. If there is tension in the rear axle assembly, use a lever to turn the input shaft to get it into neutral.

**ALWAYS REMEMBER THAT THE GEARBOX MUST BE IN NEUTRAL WHEN THE MACHINE IS NOT MOVING BY ITSELF.**

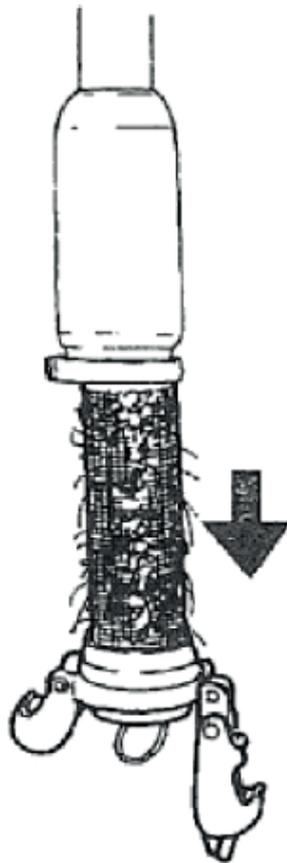

## Maintenance

Once a week in the irrigation season:

Check that no water is entering the oil on the rear axle assembly. Lubricate the steering, roller chain for hose guides, roller chain for forward traction, cross track shaft for hose guide with water-repellent grease.

Check tyre pressure (35 psi)

Clean the filter at the turbine outlet if required

Check that the hose is positioned neatly.

Remember to check the guide pins in the hose guides regularly.

Remember to tighten the wheel bolts regularly.

Note: The battery should be charged once a month during the season to maintain full power and extend its useful life.

## Preparation for winter

Drain water from the machine:

Unwind the hose completely, release the brake and tighten the V-belt, but do NOT put the machine in gear. Then drive the machine into the tractor.

REMEMBER before unwinding the hose:

Open the filter coupling. Open the valve in the base of the turbine. On machines with overpressure stops, press START on the computer to open the main valve and allow the water to flow out freely.

Remove the battery and do not install it until you use the machine again.

#### Lubrication and oil:

Lubricate front wheel hubs, front spindles, hose guides, bearings on hose guides and drums. Check for water in the oil in the rear axle assembly and hydraulic tank. Oil in the rear axle assembly should be changed every two years. Hydraulic oil and filter should also be replaced every two years.

#### Faults on the irrigator

Check the following before calling a technician:

##### 1. If the machine is irrigating, but not moving:

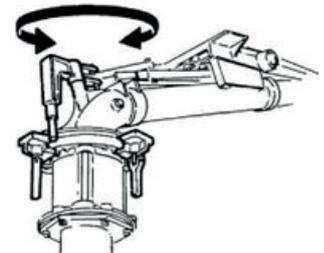

- a. Check that machine is in gear.
- b. Check if it is performing pre-irrigation or post-irrigation.  
(Can be seen on the display when the LED is on).
- c. Check if pressure drop valve is closed.
- d. Check that end stop sensor is in place.  
(Can be seen on the display when the LED is on)
- e. Check that toggle switch is in operation position.
- f. Check that decoupling valve is closed (for hydraulic motor).
- g. Check that filter on turbine is not blocked.
- h. Check that turbine can turn easily.
- i. Check that the brake is released.
- j. Check that the hose is wound up tightly. If it is loose, tighten it. This is done by manually rotating the drum.  
Remember that the pawl must be locked securely.

##### 2. If the machine does not wind up the hose properly, it may be that:

- a. The hose guide needs to be adjusted.  
To adjust the guide, remove the chain from the hose guide to the cross track shaft. Then turn the cross track shaft until the hose guide fits the hose again. Fit the chain again.
- b. The guide pin is worn and needs to be replaced.
- c. The V-belts are too slack or worn. To tighten the belt, move the hole plate at the end of the cable. If it cannot be moved any further, the cable needs to be shortened.

Nelson SR 150 is factory-adjusted to Danish conditions and ready to use after the following three steps:

1. Select and install the nozzle size that best suits your application. Performance data for the different sizes are shown in the table below.
2. Adjust the stop on the part circle to obtain the desired irrigation angle.
3. There is a grease nipples which should be checked once a week for refilling.

## ADJUSTMENT

The only thing you can adjust is the counterweight on the drive arm. By moving the counterweight forward, the gun will slowly irrigate from side to side. If you move the counterweight back, the gun will irrigate quickly. If it does not irrigate quickly enough, you can remove the brake springs (no. 778474) in pairs (contact the service department).

**WARNING: DO NOT ADJUST WHEN THE GUN IS IRRIGATING!!**

**DANGER.....: HIGH WATER PRESSURE – STAY CLEAR!!**

**TABLE FOR NELSON SR 150**

 Motor 2, stop motor  
 Slow start of turbine  
 Slow closing of inlet  
 Water volume + spreading width

**Accessories:**

GSM, SMS messages for remote control.  
 Analogue pressure sensor.

Short instructions for use

Place machine:

SPEED	30.0m/h
DOSE	22 mm
TIME	7:28 STOP 7:28
STATUS	STOP Sensor

Move machine to a new lane. Display shows start and stop time. Pull hose out to end of the lane. (e.g. 250 m)

Select Speed:

SPEED	30.0m/h
DOSE	22 mm
TIME	7:56 STOP17:16
STATUS	STOP Sensor

Display now shows stop after 9h 20m. Press the "+" or "-" key to set the speed. Speed can be adjusted during irrigation.

SPEED	25.0m/h
DOSE	26 mm
TIME	7:58 STOP17:58
STATUS	STOP Sensor

SPEED has decreased, DOSE has increased and STOP time is later.

Start Irrigate, Select PRE- and POST Irrigation.

SPEED	25.0m/h
DOSE	26 mm
TIME	7:58 STOP17:58
STATUS	STOP Sensor

Press START to start. Press PRE and POST for pre- and post-irrigation respectively. STOP time will be later when PRE and POST irrigation are selected.

Starting:

SPEED	25.0m/h
DOSE	26 mm
TIME	8:00 STOP18:38
STATUS	Running

The turbine will start when the water pressure increases. After a short period, the regulator finds the correct speed. Irrigation continues until STOP SENSOR is activated at the end of the lane.

-PRE Irrigation

SPEED	25.0m/h
DOSE	26 mm
TIME	8:02 STOP18:38
STATUS	PRE Irrigate

If pre-irrigation is selected, the turbine stops immediately after performing a start and pre-irrigation. When the pre-irrigation time has elapsed, the turbine starts and the machine changes status to Irrigating.

-POST Irrigation

SPEED	25.0m/h
DOSE	26 mm
TIME	18:20 STOP18:38
STATUS	POST Irri.

If post-irrigation is selected, the turbine stops at the end of the lane when the stop sensor is activated. Post-irrigation then starts.

Stop:

SPEED	25.0m/h
DOSE	26 mm
TIME	18:38 STOP18:38
STATUS	STOP Sensor

Stop sensor is activated, turbine and water are shut off. The machine is now ready to be moved to a new lane.

Press the **MENU** key 2 times to display menu 3

Press the **MENU** key 3 times to display menu 4

Press the **MENU** key 4 times to display menu 5

Press the **MENU** key 5 times to display menu 6  
(Only if GSM is selected)

When ■ appears in the display, this indicates that the relevant function is ON.

Standard menu:

<b>SPEED</b>	<b>30.0m/h</b>
<b>DOSE</b>	<b>22 mm</b>
<b>TIME 14:10 STOP 7:43</b>	
<b>STATUS Running</b>	

Standard display

- SPEED** Speed. Can be changed at any time during irrigation using the "+" and "-" keys.
  
- ZONE** Current zone 1...4, with corresponding speed. The speed cannot be changed. (Zone active)
  
- DOSE** The dose is calculated from the speed and constants and shows the current number of mm for irrigation. As SPEED increases, DOSE decreases. (Constants 11 and 12)
  
- TIME** To set the time: Set SPEED to 11.1 m/h and press the **PROG** key 3 + 1 times until the display shows <CONST 1 TIME>. The time can then be set with the "+" and "-" keys. When the battery has been disconnected, the clock will show 0:00 until it is set again.
  
- STOP** The time that irrigation is completed, incl. pre- and post-irrigation. If the clock is not set and shows 0:00, the total irrigation time is displayed.
  
- STATUS** Irrigation status, e.g.:
  - < Stop sensor >
  - < Irrigating >
  - < Pre-irrigating >
  - < Post-irrigating >
  - < LOW pressure >
 See explanation in STATUS chapter.

If the display shows: **LOW BATTERY** instead of SPEED, the battery voltage is below 11.8 V and the battery needs to be charged.

MENU 2

<b>BATTERY</b>	<b>12.8V</b>
<b>CHARGE ON</b>	<b>0.231A</b>
<b>PRE. 0:45 POST 0:45</b>	

- DISTANCE Length of the unwound hose. The length can be changed immediately after pressing the **PROG** key 3 times, using the "+" and "-" keys.
  
- BATTERY Battery voltage.
  
- CHARGER ON Shows when the battery is being charged by a solar cell. The battery is charged when the voltage is below 14.0 volts.
  
- PRE Shows the pre-irrigation time.
  
- POST Shows the post-irrigation time.
  
- The pre- and post-irrigation times can be changed immediately after pressing the **PRE-** or **POST-** keys, using the "+" and "-" keys.

MENU 3

PRESS SENSOR		■
STOP SENSOR		■
SPEED SENSOR	■	■
MOT1 0.0A	MOT2	1.8A

PRESSURE SENSOR

Shows that the pressure is high when block is lit. **The machine can only move when the pressure is high.** If no pressure sensor is fitted (machine data 14 = 0), the machine will operate regardless of pressure status.

The machine can be fitted with analogue pressure sensors. Sensors must be connected according to the diagram. Pressure sensor functions, except for pressure display, are the same as for digital pressure sensors. There are constants for the pressure sensor type. Similarly, set point and hysteresis can be selected for each machine.

PRESSURE	6.2	■
STOP SENSOR		■
SPEED SENSOR	■	■
MOT1 0.0A	MOT2	0.0A

Shows pressure in [BAR] (00.0) or [PSI] (000). Pressure is high when ■ is lit.

**The machine can only move when the pressure is high.**

If no pressure sensor is fitted (machine data 14 = 0), the machine will operate regardless of pressure status.

PRESSURE	--.-	
STOP SENSOR		■
SPEED SENSOR	■	■
MOT1 0.0A	MOT2	0.0A

STOP SENSOR

Shows that the magnet is aligned with the stop sensor when block is lit.

**The machine can only start when the magnet is aligned with the stop sensor.**

The stop sensor has 3 functions:

1. Reset distance.
2. Post-irrigation.
3. Stop pulses to the regulator motor.

SPEED SENSOR

For the speed sensor test, block is only lit when the magnet passes the sensor.

MOT1, MOT2

Displays the current motor current. When the current exceeds 4.5 A, the motor stops.

**If the current exceeds 4.5 A and the valve is not in the outer position, there may be a blockage in the valve.**

MENU 4

<b>ACTUAL SPEED</b>	<b>22m/h</b>
<b>START</b>	<b>0 : 00</b>
<b>STOP</b>	<b>7 : 43</b>
<b>WORKING HOURS</b>	<b>123h</b>

**CURR. SPEED** Shows the current speed. That is, the speed at which the machine is moving now. This can be used to find how fast the machine can move. The current speed may differ slightly from the set speed, especially at the start. This does not matter, as regulation ensures that the average speed within 10 metres is correct.

**START** Start machine delay. The machine start time can be delayed by up to 24 hours. To set the start time, press the **PROG** key 3 times, then set the time using the "+" and "-" keys.

**STOP** The time that irrigation is completed with a delayed start.

**OPERATING HOURS** Shows how many hours the machine has been running since the electronics started for the first time.

MENU 5

<b>0m</b>	<b>30 . 0m/h</b>	<b>0m</b>
<b>0m</b>	<b>30 . 0m/h</b>	<b>0m</b>
<b>0m</b>	<b>30 . 0m/h</b>	<b>0m</b>
<b>0m</b>	<b>30 . 0m/h</b>	<b>0m</b>

This menu is for irrigation at different speeds in zones of the lane. Press the **PROG** key 3 times to program the zones. See later chapter for details.

## MENU 6

SIGNAL	23
NETWORK	HOME
A:	+45123456
B:	+45234567

SIGNAL	GSM signal strength.
NETWORK	GSM network.
A:	First number on "SMS" list.
B:	Second number on "SMS" list.

See GSM chapter for details.

**START:**

The turbine can only start if the magnet is aligned with the end stop sensor (or end stop sensors). See menu 3 for control of the STOP SENSOR. Press the **START** key to turn on the water. The regulator valve for bypass around the turbine then closes. (Turbine starts). If the end stop sensor is not in place, only the main valve can be opened, which then immediately closes again. Used to relieve pressure before removing charge hose from hydrant.

**DEFERRAL OF START TIME**

First press the **STOP** key to shut off the water supply. Then press the **MENU** key 3 times and **PROG** 3 times. The start time can be set using the "+" and "-" keys. Finally, select pre- and post-irrigation. To exit, press **MENU**. Info: The clock can only be set forwards.

**STOP:**

When the magnet is removed from the end stop sensor, the turbine stops and the main valve shuts off the water (turns on the water at negative pressure). If post-irrigation is selected, rewinding stops when the magnet is removed from the sensor. When the post-irrigation time has elapsed, the main valve closes. When the **STOP** key is pressed, the turbine stops immediately and the main valve shuts off the water, regardless of whether post-irrigation is selected.

**SUPERVISION:**

Program Rain has a built-in supervision system. The supervision system will be activated if for any reason the machine has water in the same location for longer than a specified time. This time is factory-set to 20 minutes. If the time is set to 0, there is no supervision. (See constants on page 17 for setting the supervision time.) If speed supervision less than 50 % of pre-selection is required, select speed supervision together with the above time.

**SPEED:**

The speed is set using the "+" and "-" keys. First count up in steps of 0.1 m/h. After 10 steps, count up in steps of 1 m/h. The speed can be changed at any time during irrigation. If the speed changes during irrigation, the dose and time for the remaining irrigation will be calculated immediately based on the new speed.

**PRE-IRRIGATION:**

If pre-irrigation is required, press the **PRE-** key. The pre-irrigation time is calculated as 8 x the time to move 1 m at the current speed. The constant can be changed individually for pre- and post-irrigation. (See constants). If pre-irrigation is selected, the machine will move forward approx. ½ m, after which the machine will stop and stand still for as long as pre-irrigation is performed. Menu 2 shows the number of minutes remaining of the pre-irrigation time. If you want to cancel pre-irrigation, press the **START** key. This will cancel both pre- and post-irrigation and the turbine will start.

**POST-IRRIGATION:**

If post-irrigation is required, press the **POST-** key. The post-irrigation time is calculated as 8 x the time to move 1 m at the current speed. The constant "8" can be changed individually for pre- and post-irrigation. (See constants on page 17). Post-irrigation starts counting down when the magnet is removed from the stop sensor. When the stop sensor is activated, the turbine stops and post-irrigation starts counting down (see menu 2). When the post-irrigation time has elapsed, the main valve closes. (Opens in installations with negative pressure stops). For machines with mechanical end stops: The turbine stops when the stop sensor is activated. When the post-irrigation time has elapsed, the turbine starts and the machine moves to the mechanical end stop. Press **START** to cancel post-irrigation. If constant "8" (early stop) is selected, the machine will stop when it reaches the selected distance.

**PROGRAMMING 4 DIFFERENT SPEEDS:**

The hose must be unwound before programming, so the computer knows the number of metres in the irrigation lane. The following example assumes that the unwound hose is 400 m. Press the **PROG** key 3 times and the display will show:

400m	30.0m/h	0m
0m	30.0m/h	0m
0m	30.0m/h	0m
0m	30.0m/h	0m

The desired speed can now be selected, in this case 25.0 m/h. Press the **PROG** key and the display will show:

400m	25.0m/h	0m
0m	30.0m/h	0m
0m	30.0m/h	0m
0m	30.0m/h	0m

The desired distance can now be selected, in this case 300 m. Press the **PROG** key and the display will show:

400m	25.0m/h	300m
300m	30.0m/h	0m
0m	30.0m/h	0m
0m	30.0m/h	0m

Now that the first zone is programmed, apply the same procedure to all 4 zones. Zone 4 automatically ends at 0. When zone 4 is programmed, press the **PROG** key again and the display will show:

<b>DELETE</b>	<b>PRESS</b>	<b>MENU</b>
<b>SAVE</b>	<b>PRESS</b>	<b>PROG</b>

If **PROG** is pressed, the program is stored and irrigation will be performed according to this program.

If **MENU** is pressed, the program is deleted and the speed is the same for the entire irrigation lane.

<b>STATUS</b>	Status line in display
<b>**IRRIGATING**</b>	The machine has not started, but speed signals are being received and it is attempting to maintain the selected speed.
<b>IRRIGATING:</b>	The machine is irrigating and functions as intended.
<b>LOW PRESSURE:</b>	Water pressure is low. Individual action according to constants and machine data.
<b>STARTING:</b>	User has pressed the <b>START</b> key and start sequence is being performed.
<b>START TELE:</b>	The machine is starting after receiving an <b>SMS</b> .
<b>START TIMER:</b>	The machine is waiting for start delay. (See Menu 4).
<b>START PRESS:</b>	The machine is performing a start after pressure rise. The machine uses the pressure level to start a second machine on the ground line.
<b>START REJECTED:</b>	User is pressing the <b>STOP</b> key to block <b>PRESSURE</b> and <b>SMS</b> start.
<b>STOP USER:</b>	User has pressed <b>STOP</b> and the machine has stopped.
<b>STOP TELE:</b>	The machine has received an <b>SMS</b> with <b>STOP</b> and has stopped.
<b>STOP SENSOR:</b>	The machine has reached the end and is stopped by <b>STOP SENSOR</b> .
<b>STOP DIST:</b>	The machine has reached the stopping distance. (See constant for early stop)
<b>STOP DELAY:</b>	The machine has reached the end, but waiting xx seconds to perform the stop sequence.
<b>STOP REJECTED:</b>	User is pressing the <b>START</b> key to block <b>SMS</b> stop.
<b>STOP MONITOR:</b>	Monitoring has stopped the machine. The machine has not moved for xx minutes. (See constant for monitoring).
<b>CREATE PRESSURE DROP:</b>	The machine is creating a pressure drop to stop the main pump. After 2 minutes, the valve closes to prevent draining the ground line.
<b>PRE-IRRIGATING:</b>	The machine is performing pre-irrigation.
<b>POST-IRRIGATING:</b>	The machine is performing post-irrigation.

**There are a variety of constants that can be modified by the user.**

These constants will be stored for many years, even if the battery is removed.

**Programming procedure:**

Adjust the speed to 11.1 m/h to access the constants.

Press the **PROG** key 3 times in quick succession to access and change the constants.

Press the **PROG** key again to count forward to the constant you wish to change.

Press "+" and "-" to adjust the value of the constant.

Press the **MENU** key to save the change and the display will return to normal.

If the **MENU** key is not pressed, the display will return to normal after 1 minute and the change will not be saved.

**CONSTANTS**

Cons no.	Note	Fact. Adj.	Min. Value	Max. Value	Description
0		100	-	-	Enter 111 to reach machine data
1		00:00	00:00	23:59	Time in line 2 is set
2		8	1	15	Pre irrigation
3		8	1	15	Pre irrigation

**Program Rain can be set to 2 different types of sensors.**

See machine data no. 16 Sensor

One is a round sensor with 4 built-in sensors and can only be used for rollers with 1 magnet. When the battery is connected, the display shows the following for 2 seconds: **VERSION n.n0**.

The other is a rectangular sensor with 2 built-in sensors (double sensor). This is used for scanning on rollers with more than 1 magnet and for discs with from 1 to 20 magnets. When the battery is connected, the display shows the following for 2 seconds: **VERSION n.n1**.

**Cable connection**

**Troubleshooting:**

?

The turbine does not start when the **START** key is pressed.

Answer:

The magnet at the stop sensor is not in position or the sensor or sensor cable is damaged.

Stop sensor: The mark ■ must be on when the magnet is in position and off when the magnet is removed. See Menu 3.

A damaged cable can be assembled in an epoxy moulded assembly or with shrinkable tubing and glue.

However, since the sensors are more sensitive than telephone cables in the ground, cable assembly must be seen as an emergency solution.

If a pressostat is installed, the water must be pressurized. The mark ■ must be on when there is pressure.

?

No numbers in the display.

Answer:

Battery disconnected. Fuse inside the box may have blown. The fuse will blow if the battery is wrongly connected.

An additional fuse is available from the factory on a single fuse terminal on the circuit board.

Fuse 5A. Battery voltage 12V. See Menu 2.

?

Clock is set to 00:00

Answer:

If the power is interrupted, the clock is reset. The end time is then the number of hours and minutes until irrigation is complete.

See page 15 for setting the clock.

?

The number of metres is not counted correctly and the speed is not correct.

Answer:

If the speed is measured with a roller running on the hose, check whether the roller is running smoothly or if it is not installed properly on the hose. You will also need to check that the roller sensor with cable is functioning properly. See Menu 3 Speed sensor.

The 2 marks ■ ■ must light up in the following order from the right during unwinding: The first one turns on, then the second one turns on, the first one turns off, then the second one turns off. During rewind, this happens in reverse order.

?

Only half or perhaps 2/3 of the actual length has been counted.

Answer:

The stop bracket with magnet for the stop sensor may have jumped, so the magnet has been removed temporarily from the stop sensor. This will reset the counter. Or a hose turn has been so loose that it has impacted the miswinding bracket.

This is usually the same as the impact on the stop bracket and has the same result.

Even if the metres are not saved in the memory, irrigation will still continue at the selected speed and the machine will stop as normal. However, there will be deviations if the speed is measured on a gear disc and the calculation is based on formulas entered in MACHINE DATA. This is because the electronics do not know which hose layer the machine is running on. Finally, the metres can be entered manually.

See page 21. CONSTANT no. 7

**Combining the various constants:**

The machine will always be able to run with the factory-set constants. However, there will be different conditions from farm to farm and from machine to machine. Many requests can be met by changing the constants.

**1. Slow start-up of turbine. Set machine data no. 13 initially to approx. 2-4.**

This causes the speed regulator valve to close only about halfway, after which continued closing is performed in steps until the rewind speed reaches the set speed. The valve can then be fine-tuned to close first to the point where the turbine starts running and then to close in steps until the set speed is achieved.

**2. Slow opening of inlet. Set machine data no. 17 to 1.**

Opening for the water is then performed in steps.

**3. Only one motor for speed regulation, set machine data no. 12 to 0.**

Post-irrigation starts once the turbine stops, when the magnet at the stop sensor is affected. After the post-irrigation time has elapsed, the machine will restart and move to the mechanical stop.

**4. Start up no. 2 machine when no. 1 stops. Set machine data no. 12 to 0.**

With a pressostat installed on both machines, set the pressostats between the machine's operating pressure and the pump pressostat's stop pressure. For example, the operating pressure may be 6 bar and the pump stop 9 bar. Set the pressostats on the machines to 7.5 bar. No. 2 machine will then start up when the slow closing of the first machine reaches the point where the pressure in the ground line reaches 7.5 bar. Be aware that if the height difference of the fields is too great, the required pressure differentials that the pressostat must be set to may be too great.

**5. The machine should stop due to low pressure and with a pressostat installed. Set constant no. 6 to 1 and set machine data no. 12 to 2.**

This means that the stop valve opens instead of closing if the line connection to the stop valve is the same.

After 2 minutes, close it again, otherwise you will not be able to obtain pressure at start-up. When machine data 12 is set to 2, the valve can only be opened with the stop sensor, stop button and monitoring. But not when the pressostat is switched off.

**GSM**

PR10-12 can use BG52T ,GSM Modem from Cinterion.

The machine can be started, stopped or queried about status by sending an SMS.

**Commands**

Start	Starts the machine.
Stop	Stops the machine.
Speed ###	Set the desired speed 3 to 400 m/h.
Status	Returns the current machine status.

SMS can be written in small, large or mixed characters.

If you call the modem from a GSM phone, you will receive an SMS with Status.

**Status**

<b>SPEED</b>	<b>30.0m/h</b>
<b>DOSE</b>	<b>22 mm</b>
<b>TIME 14:10</b>	<b>STOP 18:16</b>
<b>STATUS Irrigating</b>	
<b>DISTANCE</b>	<b>123m</b>
<b>BATTERY</b>	<b>12.8V</b>
<b>CHARGER ON</b>	<b>0.231A</b>

SMS sent from machine contains miscellaneous information.

SMS is sent at:

LOW PRESSURE:	The machine is stopped due to a lack of water pressure.
STOP SENSOR:	The machine has reached the end and is ready for a new lane.
STOP TELE:	The machine is stopped via an SMS.
STOP DIST:	The machine has reached the stopping distance. (Constant 8)
STOP MONITOR:	Monitoring has stopped the machine. The machine has not moved for xx minutes. (See constant for monitoring).

**How to start the system:**

Disconnect the battery from the electronics.

Insert the SIM card in a regular mobile phone and change the pin code to 1111.  
Try sending and receiving an SMS to see whether the SIM and account work as intended.

**Note that SIM card *MUST* support 2G.** Some operators do not support 2G.

Insert the SIM card in the modem device.

Press the card with a pen or similar to remove the card.

Insert the SIM card in the holder and press it back into the casing.

Connect the antenna, power and communication cables

Modem, antenna, communication cables. Power cables and installation kits can be purchased from Nortoft Electronics.

Connect the battery and set machine data #30

- = 0 No GSM
- = 1 Use GSM, all tele numbers can be used, no speed setting
- = 2 Use GSM, only the numbers created in the SMS list can be used.

<b>SPEED</b>	11 mm/h
<b>DOSE</b>	22 mm
<b>TIME 14:10</b>	<b>STOP 7:43</b>
<b>M.DATA 30</b>	1

See chapter 11 for setting up data.

After approx. 30-45 seconds, the modem should be connected to the GSM network.

<b>SIGNAL 23</b>
<b>NETWORK HOME</b>
<b>A: +45123456</b>
<b>B: +45234567</b>

Signal strength, 0–31 and the network is then displayed in menu #6.  
 Signal strength of 10 or above is a stable connection.  
 Signal strength of 99 indicates no signal.  
 - Missing antenna  
 - Very poor signal

Modem has two LED to indicate status.

Green	LED
Ready	ON
YELLOW	LED
Sleeping	OFF
Searching the network	
- No SIM card in modem	Flashes quickly
- Incorrect PIN code	
- No GSM network available	
STANDBY	
(Registered on network)	Flashes slowly
Connection (TALKING)	On

When an SMS is received, the display shows:

<b>Receiver SMS</b>
<b>#: +45123456</b>
<b>Status</b>

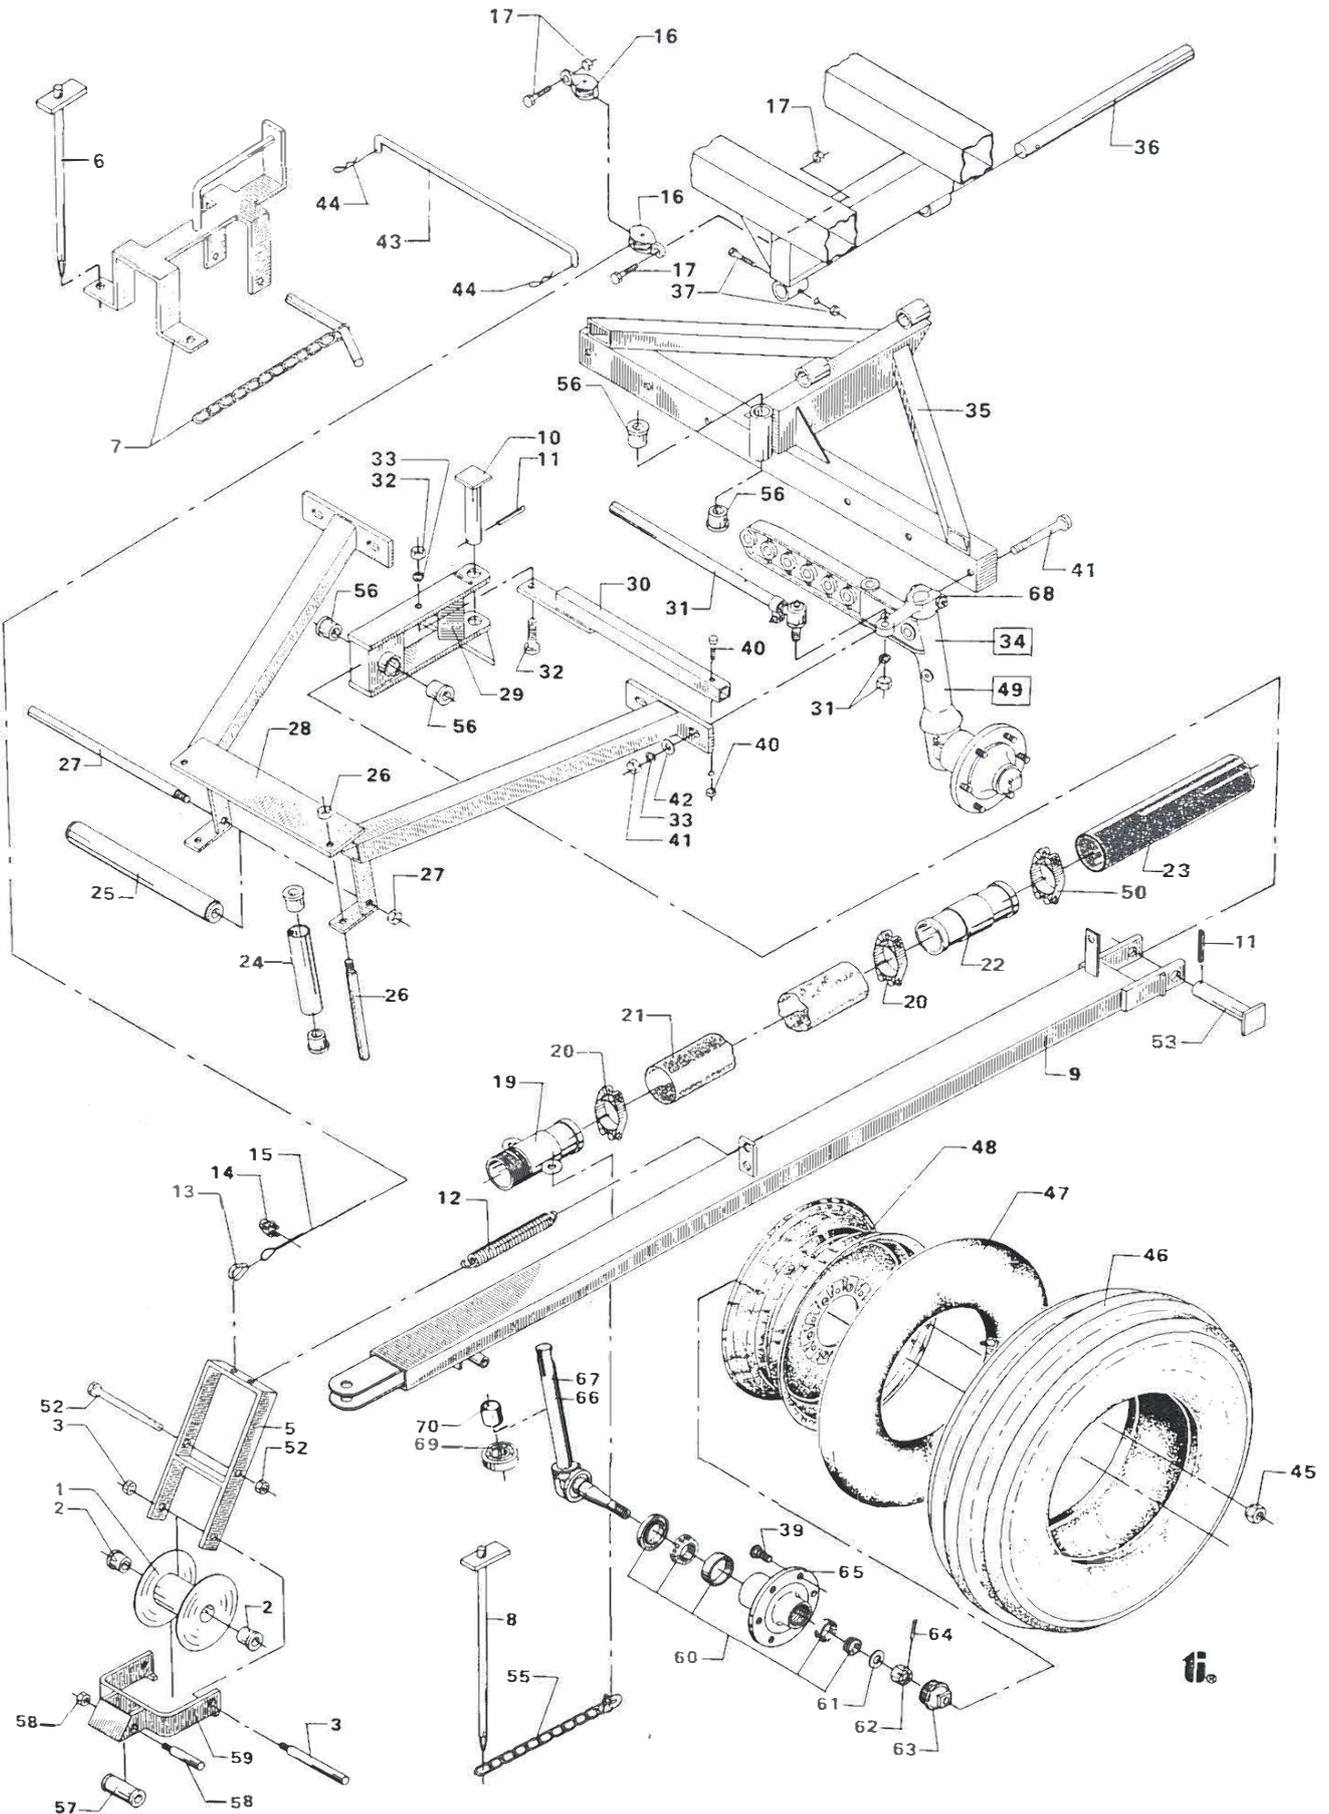

Receiving an SMS, sender's phone number and 40 characters of message. All SMS can be received, but only known commands are accepted.

When an SMS is sent, the display shows:

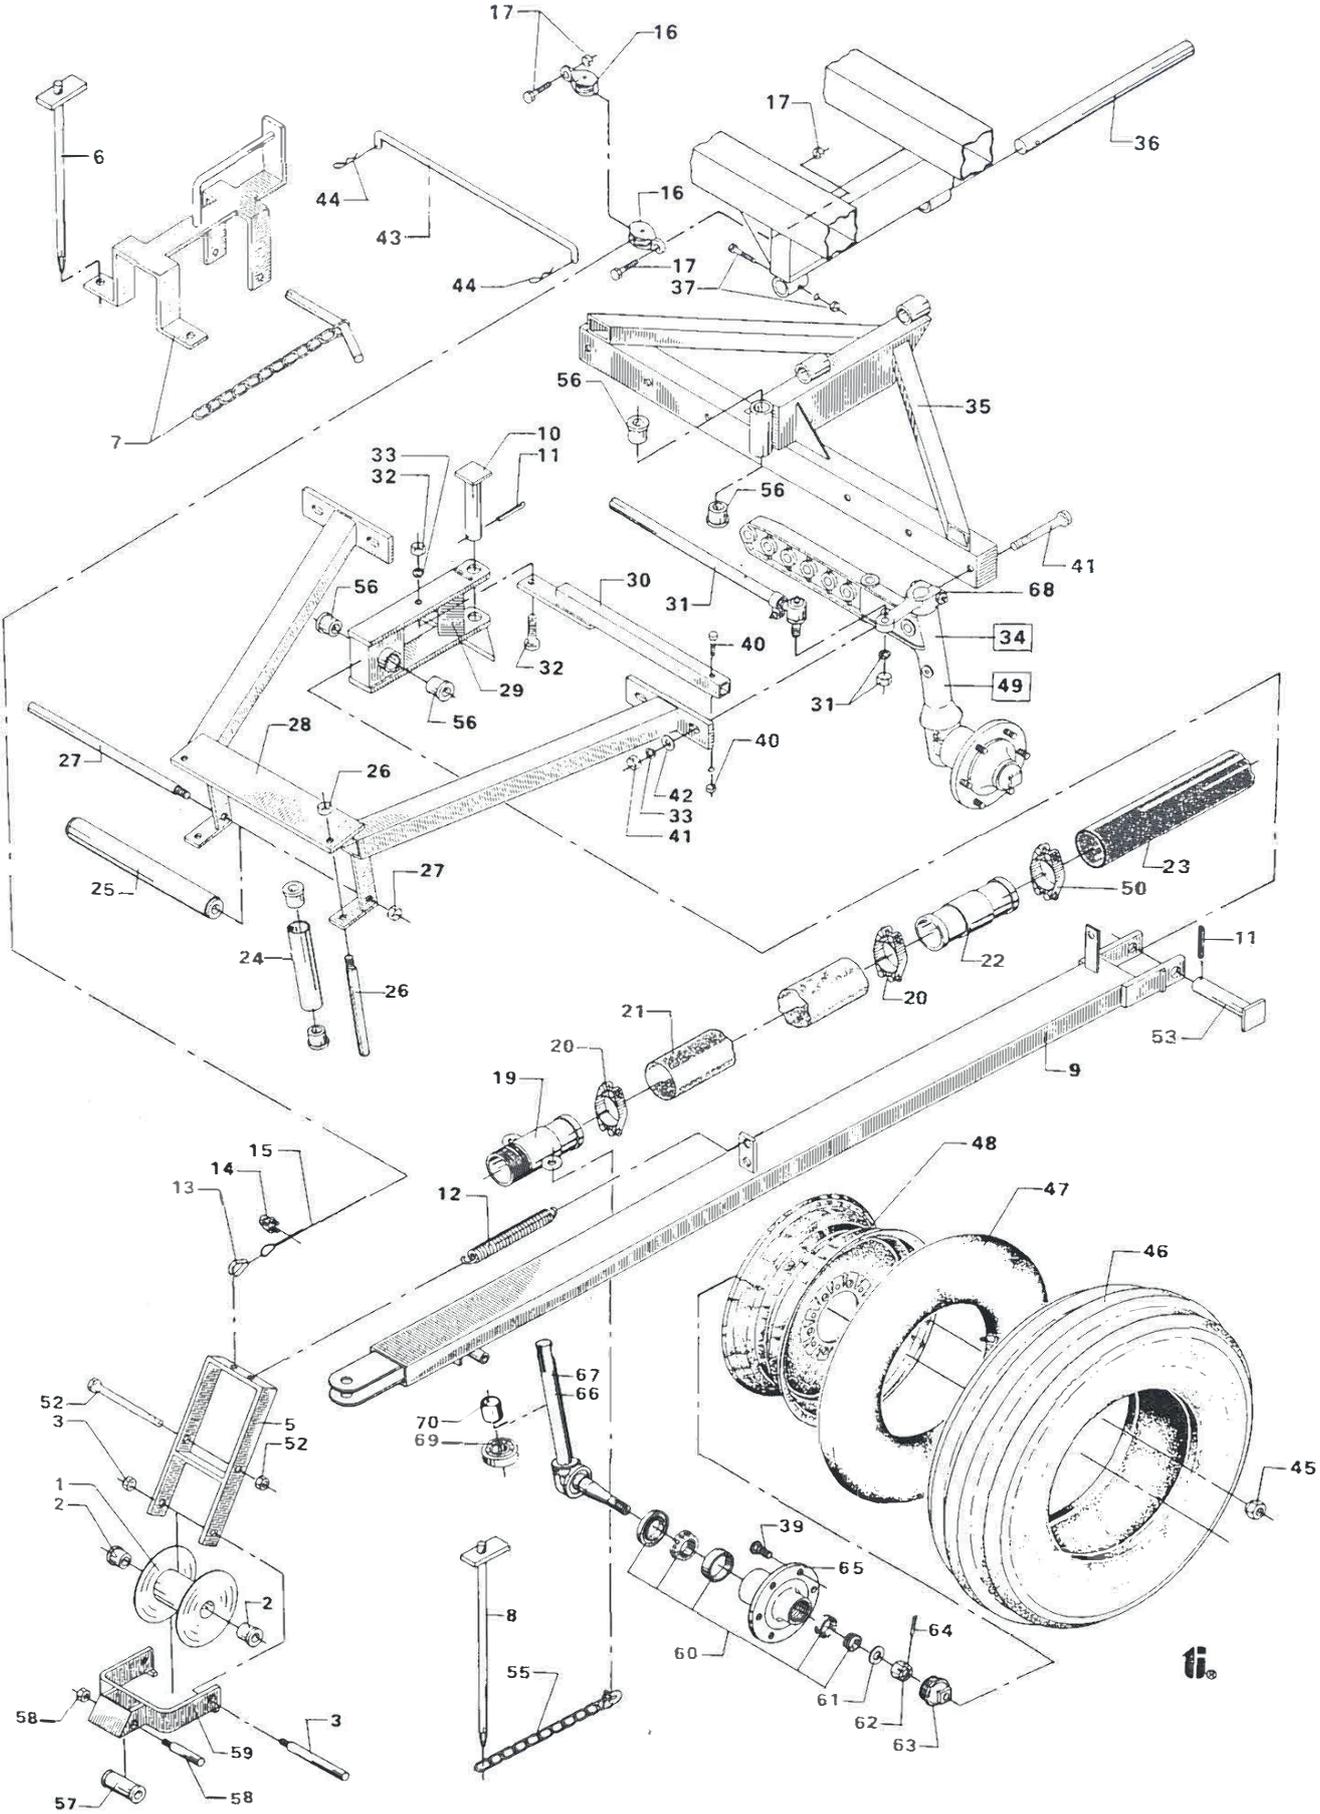

<b>Sender SMS</b>
<b>#: +45123456</b>
<b>Status Running</b>

Sending an SMS, receiver's phone number and machine status.

For further information about GSM modems, please refer to the manufacturer's manuals.
